SUMMARY

UX/UI designer with an industrial design degree, a UX/UI bootcamp and 5+ years designing data-heavy products. I design and build the internal tools that my team and other teams at Profectus Group use daily, working in React and HTML on top of databases built by backend teams; they replaced legacy file-upload workflows and save an estimated 10-20 hours a week per reporting employee. I also write the SQL behind the interface and know affiliate and performance marketing reporting first-hand, so I design around the decisions the numbers need to support. I prototype in Figma and ship working front ends with Figma Make, Claude Code and Codex.

SKILLS

- **UX/UI & product design:** Figma, design systems, wireframing, prototyping, user research, usability testing, journey mapping, dashboard and data-visualization design, accessible design (screen-reader-friendly PDFs)
- **Front-end development:** React, HTML, CSS, JavaScript; building working, database-connected front ends; AI-assisted development with Figma Make, Claude Code and Codex
- **Data & SQL:** SQL (StarRocks; joins, aggregations, reporting, CTEs in progress), Apache Superset, Excel (pivot tables, lookups, Power Query in progress), reporting automation
- **Performance & affiliate marketing:** affiliate data and reporting, partner and performance tracking, cross-regional reporting that supports marketing decisions
- **Web:** Webflow with custom code, Netlify hosting and embedding of interactive data modules
- **Team & tools:** cross-functional leadership, stakeholder alignment, working with backend and development teams, Jira, Notion, Slack, Google Workspace, Procreate

PROFESSIONAL EXPERIENCE

Data & Reporting Operations Team Lead, Profectus Group | Remote (Cape Town) and Toronto 05/2021 – Present

- Designed and built internal tools in React and HTML that my team and other teams use daily, connected to several databases built by backend teams. They replaced legacy file-upload workflows and save an estimated 10-20 hours a week per reporting employee.
- Built the management tool for the data-scraping automation backend, used to add and manage accounts and deal structures and to map tables and columns for scraping.
- Built an internal campaign tagging system that funnels tracking data into reporting correctly.
- Led the design and automation of a global SQL-powered dashboard that replaced legacy Excel reporting.
- Designed multiple internal reporting dashboards that streamline performance tracking and business insights.
- Lead a multi-regional team that owns affiliate data and reporting pipelines and delivers accurate affiliate data across international regions.
- Scope tools and automation with developers and backend teams, reducing manual effort and error rates.
- Build and maintain reporting in StarRocks SQL and Apache Superset.
- Standardized documentation and internal processes to improve data literacy and team autonomy.

Product & Web Designer / Developer (Part-Time), Pulsenics | Remote 10/2020 – Present

- Redesigned and rebuilt most of the company website in Webflow, where most pages are now new, while keeping its original visual style.
- Co-designed the new homepage and product pages with another designer, and built the Knowledge Centre and News pages (CMS-driven pages, filters, animations, responsive layouts).
- Implemented the Knowledge Centre's interactive Plotly data modules (hosted on Netlify and embedded in Webflow), and built brand-styled table components with a standalone table builder tool.

- Built the current internal management tools and dashboard used to monitor EIS, set up experiments and manage connected Pulse Probes.
- Built the platform's UI/UX system from the ground up with another designer, for use by researchers and engineers.
- Produce marketing collateral, including brochures, slide decks and LinkedIn graphics, for product launches and investor communications.

Annual Report Designer (Freelance), Canadian Rheumatology Association | Remote

2020 – 2024

- Co-designed and produced the association's annual reports for four consecutive years, with custom covers and full layouts.
- Delivered accessible, screen-reader-friendly PDFs that met brand standards and accessibility requirements.
- Worked directly with the marketing operations manager and stakeholders across digital and print distribution.

EDUCATION

- **Bachelor of Design (BDes), Industrial Design**, OCAD University, Toronto | 2019. Human-centered design, prototyping, service design and systems thinking.
- **UX/UI Design Immersive Bootcamp**, General Assembly | 2020. Wireframing, prototyping, usability testing, and an end-to-end responsive web app in Figma.

SELECTED PROJECTS

- **Internal Data Tools (React)**: scraping backend management, table and column mapping, and a campaign tagging system, used daily across teams and connected to backend databases.
- **Pulsenics Internal Management Tools**: platform for EIS monitoring, experiment setup and Pulse Probe management, designed around researchers' workflows.
- **Affiliate Dashboard Automation**: global SQL-powered dashboard that replaced legacy Excel reporting.
- **Pulsenics Website Redesign**: redesigned and rebuilt most of the company site in Webflow with another designer, including the homepage, product pages and Knowledge Centre, built within the site's existing visual style.
- **CRA Annual Reports (2020–2024)**: accessible, screen-reader-friendly reports.
